Site Requirements:

1. Working on all browsers
2. Version for Desktop and Mobile friendly version for iPhone and iPad and Android phones.
3. Simple site 2 pages but very clean and user friendly and modern

Browser:

This is draft how should look the front page on browser.
a) black background with nice texture like on picture the texture should correspond to logotype colors and I would follow with dark red, dark purple, dark yellow / gold colors accents
b) 3 green dots below the logotype should be "Product" - "Demo" - "Contact" , they should follow same accents of colors so it is a one composition. This is a idea
c) The main page should be clean and very elegant looking
d) in the right upper corner should be two flags english / chinese
e) it would add a little animation when putting cursor on the dots
f) Please add in the lower right corner the Android/Apple/Windows logotypes

Pages:

1) Contact - simply pop-up window not direct to new page - pop up. All fields required
Name / email / message - submit

Its important it is well coded so all messages are sent to our email. After pressing summit when all fields are filled there Submit becomes green and changes to accept.

2) Demo - we will provide You a link and this will re-direct to our demo page so its just functional button
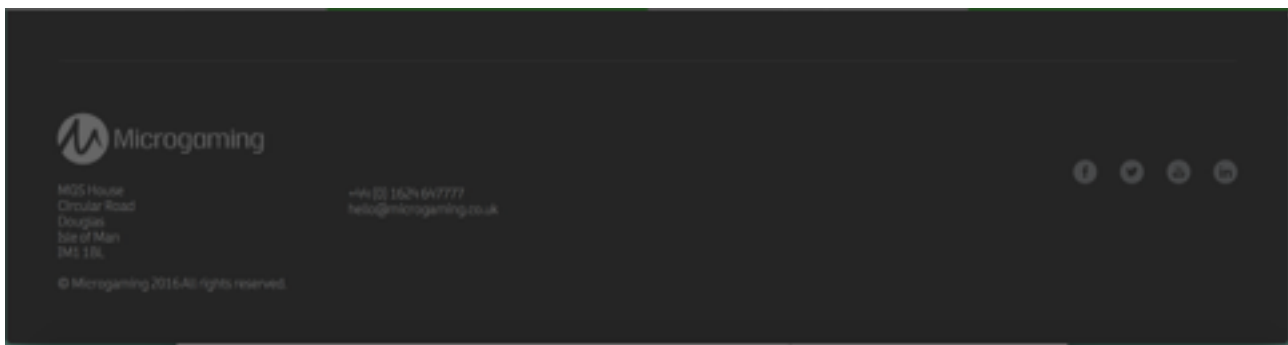

3) Products

A

B

C

A) Those are all our banners slide show simply
B) This is a field where we will inset the text - the files with text is attached and it would be great to insert them nicely on the background so it is having a kind of a composition not just pure text as those are Unique Selling Points. So there are few lines of text as introduction and then there are unique selling points.. here is the best example how it should look like http://www.microgaming.co.uk/our-magic/products when it comes to key facts section (b) should be able to scroll to make sure there is enough space to enter all USP/Key Facts
C) This is just a end of page with details. This is how it should look like

Simply grey out
1) Company Details
2) UC8 Logotype
3) email adress
4) Please insert greyed out logotypes of BMM and First Cagayan and HTML5

MOBILE PAGE:

I would like this page to act the same on mobile and here I am really looking for good mobile page adjusted and made for mobile not just a re-sized version. So very simple page but nice and mobile friendly. If You would like to understand please try to open microgaming.co.uk from mobile so You will understand what do I mean. Like on the Product page You can slide the (B) page down and up and (A) You an slide banners left and right. Very responsive and friendly. The Contact pop up is easy to fill in etc.

Regarding the coding please let us know - we are owning the domain but we need somebody to setup the codes for us and make the site running and replace it with existing one.

Attached:
1. Text file in two languages
2. Logotype_PSD
3. Banners_PSD
4. Text fo adress
